Hiring Manager
Integrated discovery and Informatics,
Ontario Brain Institute,
Toronto, ON

Dear Recruiter,

I am writing with fervent enthusiasm to express my deep interest in the OBI Informatics & Analytics Intern position. The opportunity to dive into the exciting nexus of brain research and data analysis at OBI aligns perfectly with my academic background, analytical skills, and unwavering commitment to advancing brain health.

Beyond just academic curiosity, the nexus between research and policymaking fascinates me. I have refined my analytical abilities via tough training in data management, statistics, and research methodologies throughout my current Post Graduate Diploma in Clinical Research degree. My three-plus years of dental experience have further honed my attention to detail and commitment to accuracy—qualities that are essential for managing sensitive information and maintaining the integrity of research.

I've always been captivated by the complex neurological networks that underline pain perception in dentistry, and this has sparked an interest in the brain that goes beyond the mouth cavity. My pursuit of clinical research has provided me with further opportunities to investigate these relationships, and OBI's vision to transform brain health is in line with my strong desire to further the field of neuroscience. The chance to collaborate with your esteemed informatics team and support Brain-CODE is a wonderful fit for my goals of bridging the knowledge gap between dental records and brain research, with the possibility of opening up new therapeutic and research pathways for neurological conditions.

I am a great contribution to your team because of my excellent analytical abilities, which I have earned from my expertise in clinical research and dentistry, as well as my precise attention to detail and organizational brilliance from my dental practice. My goal of bridging the gap between dental data and brain health is greatly aligned with OBI's commitment to promoting collaborative research through cutting-edge platforms like Brain-CODE. I'm excited to talk about how my special set of abilities can support your meaningful work and find out more about this wonderful opportunity.

Thanks for your valuable time.

Sincerely,

Keerthana Kanagarajan
